

Keshav Jindal

Long Beach, CA, 90815 | 562-264-9808 | keshav.jmg1@gmail.com | [linkedin.com/in/keshavjindal04](https://www.linkedin.com/in/keshavjindal04) | [Github](#) | [Portfolio](#)

Education

California State University, Long Beach, CA

Graduating May 2027

Bachelor's in Computer Science (Honors Program) GPA – 3.6 (Dean's List)

Coursework: Digital Logic, Data Structures and Algorithms, Distributed Computing and Networks, UI Design, Computer Security, Object-Oriented Programming, Machine Learning, Artificial Intelligence, Operating Systems, Deep Learning

Experience

Research Assistant | [Autonomous Research Agent](#) | California State University Long Beach June 2026 - Present

Python, LLM and VLM APIs, provenance ledgers, Docker, Linux, Git, Pandas, pytest, RAG, fine-tuning, optimization, RLHF/RLCEF

- Building an execution-grounded autonomous research-agent pipeline that plans experiments, runs code, logs artifacts, and drafts LaTeX papers, targeting 12-15 reproducible agent-generated papers with 90%+ causal-chain integrity.
- Improving research-agent efficiency and reliability by instrumenting experiment runs, artifact logs, and iterative agent workflows, targeting 25-35% stronger unsupported-claim detection while reducing manual review bottlenecks.
- Developing evaluation tooling for agent autonomy, repeatability, and scientific correctness, targeting 30%+ fewer repeated undetected failures and sub-10% false-positive flags across multi-round agent testing.

Teaching Assistant | California State University Long Beach

Jan 2026 – Present

- Guiding 80+ students with debugging and code pipelines for model training and dynamic systems, resolving 200+ issues related to networks and routing, request flows, state synchronization, and pipeline failures.
- Evaluated assignments and project submissions for over 80 students across model training and dynamic systems modules, providing detailed written feedback on architectural decisions, code efficiency, and system behavior analysis.

Research Assistant | AI Sensory Training | California State University Long Beach

Aug 2025 – Jan 2026

- Developed AI models on time-series sensor data, improving seizure classification accuracy by 30% through optimized feature engineering and model selection for workplaces.
- Evaluated model performance using precision, recall, F1-score, and confusion matrices, improving prediction sensitivity by more than 70% and co-authored research papers.

Software Developer | [JM Global Logistics](#)

May 2025 – Aug 2025

- Engineered and deployed a production logistics platform using React, Vite, PostgreSQL, and AWS S3, cutting load time from 3.2s to 1.6s and increasing customer outreach by 180%.
- Implemented secure Web3Forms lead-capture and technical SEO workflows with validation, retries, CSP, HTTPS, and DNS controls, increasing submissions by 35%, organic traffic by 50%, and ranking 12 keywords in the Top 5

Projects

[DocWeave](#) | Go, PostgreSQL, Docker, REST APIs, SSE, Prometheus, Grafana

July 2026

- Engineered a distributed Go crawler using PostgreSQL skip locked leases and four concurrent workers, processing 1,000 pages at 10.01 pages/sec with 394 ms p95 latency, zero fetch errors, and zero duplicate URLs.
- Implemented crash recovery, idempotent ingestion, distributed host throttling, SSRF and DNS-rebinding defenses, and content versioning; shipped Dockerized REST/SSE APIs with Prometheus, Grafana, full-text search, and race-tested CI.

[Barter](#) | React, TypeScript, Flask, Firebase, WebSockets, OpenAI API, Lens Studio

June 2026

- Built and shipped a full-stack application for Snap AR Spectacles using React, REST APIs, Firebase Authentication, and an OpenAI-powered chatbot to deliver real-time skill matching and guided AR navigation.
- Attracted 100+ early users, increased monthly retention by 35%, and reduced onboarding time by 40% through iterative UX improvements and guided real-time sessions.

[DevFlow Agent](#) | Python, React, FastAPI, PostgreSQL, Redis, Docker, GitHub Actions

Jan 2026

- Built a Python and React agentic developer platform using FastAPI, PostgreSQL, Redis, Docker, and GitHub Actions to automate issue planning, workflow execution, and GitHub-integrated tasks.
- Achieved 90% task success with under 2% tool-call failure across four-step workflows, reducing feature-planning time from 20 minutes to 3–4 minutes through validation, retries, and traceable outputs.

Technical Skills

Languages:

Python, Java, C, C++, TypeScript, JavaScript, SQL, Rust, Go, React, Next.js, React Native, HTML

Developer Tools:

Git, GitHub, GitHub Actions, Docker, Linux, VS Code, FastAPI, REST APIs, PostgreSQL, Redis

Cloud/Security:

AWS EC2, S3, RDS, Lambda, API Gateway, IAM, OAuth 2.0, JWT, authentication, privacy safeguards

AI/AR/ML:

TensorFlow, PyTorch, scikit-learn, OpenCV; prompt engineering; model serving; LLMs, APIs
experimental design, optimization techniques, model evaluation, interpretable ML, large-scale data analytics, NumPy, Pandas, GPU-accelerated training, RAG, embeddings, Tableau
